

## A treatise on the calculus of operations

Filesize: 5.67 MB

### ***Reviews***

*A top quality publication along with the font utilized was exciting to learn. It can be full of wisdom and knowledge Your way of life span will be transform when you comprehensive reading this book.  
(Sherwood Kshlerin IV)*

## A TREATISE ON THE CALCULUS OF OPERATIONS

DOWNLOAD

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1855 Excerpt: . . . limits, renders the symmetrical multiple integral, containing  $p$  independent variables, lff. . .  $(x \text{D}xw \text{yD}yw \text{zD}z, w \text{ . . . } -w) \text{mD}x \text{d}y \text{d}z$ . . . a maximum or a minimum, is given by the partial differential equation  $x$  where the arbitrary functions merely differ from the previous in the number of the independent variables ( $p$ ) included under them. II. It is shown (Calculus of Variations, p. 262) that the value of  $z$  which, for certain assigned limits, renders the double integral  $y(\text{D}zy (\text{D}y \text{z} \text{d}x \text{d}y \text{zD}x \text{d}y$  a maximum or a minimum, is given by the partial differential equation Similarly it may be proved that the form of the function  $w$  which, for certain assigned limits, renders the symmetrical multiple integral . . .  $y(\text{D}xw \text{f} (\text{D}w \text{w} \text{f} (\text{D}z \text{y} . . . \text{d}x \text{d}y \text{d}z . . . \text{or} . . . \text{W} \text{d}x \text{d}y \text{d}z . . .$  a maximum or a minimum, is given by the partial differential equation If there be but three independent variables  $x, y, z$ , the advanced student will find no difficulty in verifying the following theorem: --If  $S$  be a closed surface enclosing a continuous mass, the density at each point of which is constant, and  $F$  the resultant attraction of an external system  $M$  at any element  $dm$  within  $S$ , then in order that the value of the triple integral  $\text{J} \text{J} \text{J} \text{F} \text{t} \text{f} \text{m}$  taken throughout the space included within  $S$ , should be a maximum or a minimum, the distribution of  $M$  should be such that  $\text{D} \text{X} \text{A} \text{D} \text{S} \text{B} \text{D} . \text{C} \text{0}, \text{A}, \text{B}, \text{C}$  being the direction cosines...
