Detailed instructions for hooking the STK500 to your computer and breadboard. Diagrams and instructions on building your breadboard included. Book is aimed at the Debian-Linux user. This book starts with the assumption that you want to know how to write a bootloader in the C programming language. That you want to learn how to use an ISP STK500 programer. You want to understand the microchip s fuses and lock bit settings and change them as you desire. That you want to load your own bootloader on to the microchip. You will cover the Makefile , for compiling your program and uploading on to your microchip. Learn how to build your own library for programs and headers that you want to include in your programs. This includes a uart.c program and a uart.h file. The steps needed to accomplish the loading of your bootloader are walked through giving the reader good direction. The exhibits that are included greatly enhance the visualization of the process. The book includes the complete source code for all programs and header files. The complete Makefiles are also provided. The source code and instructions for loading a test programs are also included. Even the eeprom memory is lightly covered. While this is a technical subject the author provides a great deal of insight and documentation on the process. The book goes into good depth without getting hopelessly lost in computer science lingo.
